

Xcode and files:

- When connecting to the file, you need to put the complete path when using Xcode:

for example:

```
inPtr = fopen("/users/Tami/Documents/COP2220/Program5/accountBalance.txt", "r");
```

- To get the path you right click on the file >GetInfo > Where:
- When you submit your code for the grader be sure to change it back to :

```
inPtr = fopen("accountBalance.txt", "r");
```

You should also make sure your files are all plain text, there is an option in TextEdit at the top:

Format > Text > Make Plain Text
